

## RIGID HANDCUFF SERIES

ASP Rigid Handcuffs feature a locking bridge in the center of an ergonomic palm swell. Orientation disks confirm proper positioning. Raised for right-hand officers, lowered for left. The recessed finger track and contoured hand guard maintain a clear path to the bow guides. As with all ASP Handcuffs, the Rigid design incorporates a one piece unitized stainless steel frame. Cuffs are overmolded with high strength polymer. They have dual keyways and a high visibility double lock indicator.

The high contact conical bows have radiused edges. This design increases the range of adjustment for both large and small wrists. The lock action is extremely smooth, yet positive. Both double and single locks are released by turning the key in a single direction toward the bow. Flex Frame Technology reduces injury potential from excessive lateral stress. Thin. Lightweight. ASP Rigid Handcuffs. Providing officers with a new hold on control.

STEEL RIGID | 56121

ALUMINUM RIGID | 56123

*Aluminum handcuffs weigh 15% less than steel models and are distinguished by their black bows.*
