

TRI-FOLD RESTRAINT SYSTEM

Tri-Fold disposable restraints incorporate a revolutionary new twin strap design. A patented Retaining Block completely surrounds the ratchet mechanism of each restraint. The reinforcement provides protection against shimming. The design also makes it physically impossible to “pull through” the locking ratchet as is possible on other double restraints.

Each Tri-Fold strap folds in three locations for compact storage. The straps are .5" wide with rounded edges to protect the subject's wrists. The Roller Loc design provides an incredibly smooth pull during application. As resistance is applied, additional ratchet teeth roll into place to secure the straps into the Retaining Block. The diamond configuration of expanded Tri-Fold straps

provide large pre-formed loops. Once expanded, the straps can be rapidly applied. The design allows both restraints to be pulled simultaneously with the reusable pull ring.

The end of each Tri-Fold strap incorporates a recessed identification plate. Tri-Folds can be pre-marked with a report number or used to identify specific subjects during a mass arrest.

Tri-Fold straps may be opened for use and returned to a folded position for storage. However, once they have been pulled past the recessed identification plate and the teeth engage the locking ratchet, it is not possible to retract the straps for storage.
