

ASP FACTS

FEATURE: Wavemaster Grip

ADVANTAGE:

Hot, wet or humid environments make it difficult to control a baton during stressful encounters.

The geometric arcs of the Wavemaster Grip provide a series of raised ribs that lock the grip of the ASP Baton into the hand. The geometrically opposed wave pattern provides both linear and lateral retention during the most severe tactical encounters.

SPECIFICATION:

- Elastomeric grip
- Soft feel
- Tear resistant
- Improved grip durability
- Internal positioning rings
- Raised ribs
- Opposing arc pattern
- Improved linear retention
- Improved lateral retention

PERFORMANCE:

The opposing arc geometric pattern of the Wavemaster Grip locks the ASP Baton in the operator's hand. The raised ribs increase both linear and lateral retention. The baton is not easily dislodged by an assailant or during a strike.

SALES STRATEGY:

With a baton expanded, wet the gripping hand. Grasp the end shaft of the baton. Try to pull the baton from the hand of an officer.
