

ASP FACTS

FEATURE: Integral Rivet Hinge

ADVANTAGE:

Hinge Handcuffs provide increased control of violent subjects. ASP

Hinge cuffs are easily carried and rapidly applied. Because of their conical bow geometry, they fit large subjects, yet still control small wrists.

SPECIFICATION:

- Stainless steel hinge
- Heat treated link
- Four point connection
- Five piece construction
- Integral rivet
- Finished edges

PERFORMANCE:

ASP Hinge Handcuffs have a clean, smooth, finished appearance. Their four point connection system allows the cuffs to fold flat and yet be worn over belts of various thicknesses. Because connecting rivets are integral with the side plate, they cannot be driven out.

SALES STRATEGY:

Demonstrate the four point connection of ASP Hinge Handcuffs. Show how they fold flat while remaining adjustable for belt carry. Point out the reduced part count, integral rivet system and finished edges of the ASP Hinge design.
